RAHUL SINGH

Engineer - Applied Machine Learning @ Intangles Lab Pvt. Ltd. |
Building Machine Learning Solutions
Pune/Pimpri-Chinchwad Area

Summary

Machine Learning Engineer with 4+ years of production experience building and shipping ML systems for fuel analytics, telemetry intelligence, and recommendation workflows. At Intangles, I work on production algorithms for refill, theft, and data-loss detection using OBD telemetry data, smoothing techniques, statistical modeling, DBSCAN, LOESS, and ML-backed alerting systems. I enjoy turning noisy real-world data into reliable decision systems. My work includes sub-threshold fuel event detection, fuel-level signal smoothing, data-loss alerting during active vehicle movement, and refactoring production analytics code to reduce support load and improve accuracy. Current focus: Machine Learning, LLM applications, RAG pipelines, and multi-agent systems. I have built projects with FastAPI, LangGraph, pgvector, sentence-transformers, FAISS, llama.cpp, LightGBM, AWS Lambda, API Gateway, DynamoDB, S3, Docker, MLflow, and Opik. Core skills: Python, SQL, Pandas, NumPy, scikit-learn, LightGBM, XGBoost, PyTorch, FastAPI, Docker, AWS, LangGraph, RAG, FAISS, pgvector, MLflow, Opik, Matplotlib, and Seaborn.

Experience

Intangles Lab Pvt. Ltd.

4 years 4 months

Engineer - Applied Machine Learning

April 2023 - Present (3 years 4 months)

Pune District

Extended and optimized production fuel analytics algorithms on OBD telemetry data, including DBSCAN + LOESS based event detection for refill, theft, and data-loss alerts.

Built sub-threshold fuel event detection to capture small thefts/refills missed by existing threshold logic and sensor limitations.

Built data-loss detection for missing fuel level, GPS, and telemetry signals during active vehicle movement, separating sensor dropout from genuine fuel events.

Applied SMA-based smoothing to noisy fuel-level sensor data before classification, reducing false positives by 15%.

Refactored the Node.js fuel analytics codebase, fixing level-consumption mapping and bin-based mean/SD computation, reducing support queries and reclaiming 30+ hours weekly.

Junior Machine Learning Engineer

April 2022 - April 2023 (1 year 1 month)

Pune District

Worked on production ML and analytics workflows for vehicle telemetry and fuel analytics systems.

Built and debugged Node.js/Python-based analytics logic, statistical features, and data quality checks for fuel-level and telemetry signals.

Supported fuel event detection workflows by improving data processing, alert reliability, and analysis of noisy sensor data.

Education

Govt. Polytechnic kashipur

computer science and engineering , Computer Science · (2018 - 2021)
